Length of Stay	6 Days	Admission Type	Planned
Department	Orthopaedics	Treating Doctor	Dr. Anil Kumar Hegde
Qualification	MBBS, MS (Ortho), DNB	Reg. No.	KMC/38901/2014

Clinical Details

Chief Complaint:	Patient presented with severe right knee pain with difficulty in walking and climbing stairs since 2 years, worsening over last 3 months
Final Diagnosis:	Severe Osteoarthritis, Right Knee (Grade IV) (ICD-10: M17.1)
Procedure Performed:	Total Knee Replacement (TKR) — Right
Implant Used:	Cemented Total Knee Implant System (Triathlon, Stryker)
Anaesthesia Given by:	Dr. Venkat Rao, MBBS, DA, MD (Anaesthesia)

History of Present Illness:

Meena Subramaniam, a 62-year-old female with longstanding bilateral knee pain, presented for planned Total Knee Replacement. X-ray showed severe joint space narrowing with osteophyte formation, Grade IV osteoarthritis. Conservative management had failed. Pre-operative assessment completed.

Investigations at Admission:

X-Ray Right Knee AP/Lateral: Grade IV OA, complete joint space loss. MRI Knee: Meniscal degeneration. CBC, coagulation profile, ECHO pre-op: within normal limits.

Treatment Given:

Under spinal anaesthesia, right TKR performed using Triathlon cemented implant system (Stryker). Haemostasis achieved. Drain placed. Post-op physiotherapy started on Day 1.

Condition at Discharge:

Patient discharged in stable condition. Vitals stable. Wound healthy. Advised rest and follow-up.

Discharge Medications:

Tab Cefuroxime 500mg BD x 7 days, Tab Tramadol 50mg SOS, Tab Pantoprazole 40mg OD, Cap Calcium+D3 BD, Inj Enoxaparin 40mg SC OD x 10 days.

Follow-up Instructions:
