Clinical Details

Chief Complaint: Patient presented with labour pains and previous LSCS with placenta praevia confirmed on USG

Final Diagnosis: Previous LSCS with Placenta Praevia Type III (ICD-10: O34.2)

Procedure Performed: Lower Segment Caesarean Section (LSCS) with Bilateral Tubal Ligation

Anaesthesia Given by: Dr. Nalini Shetty, MBBS, MD (Anaesthesia)

History of Present Illness:

Divya Krishnamurthy, a 29-year-old primigravida at 38 weeks gestation, with previous LSCS, presented with uterine contractions. Antenatal USG showed placenta praevia Type III. Decision for elective LSCS taken by obstetrics team.

Investigations at Admission:

USG Obstetric: Single live foetus, 38 weeks, placenta praevia type III. CTG: Reactive. Blood group: B+. Coagulation: Normal. HbA1c: 5.2%.

Treatment Given:

Under spinal anaesthesia, LSCS performed via Pfannenstiel incision. Live male baby delivered, birth weight 3.1 kg, APGAR 9/10. BTL performed. Oxytocin infusion given. Uterus closed in 2 layers.

Condition at Discharge:

Patient discharged in stable condition. Vitals stable. Wound healthy. Advised rest and follow-up.

Discharge Medications:

Tab Amoxicillin-Clavulanate 625mg TID × 5 days, Tab Diclofenac 50mg TID × 3 days, Cap Iron+Folic Acid OD, Syr Vitamin C BD × 15 days, Tab Pantoprazole 40mg BD.

Follow-up Instructions:
