Length of Stay	3 Days	Admission Type	Emergency
Department	General Surgery	Treating Doctor	Dr. Girish Kamath
Qualification	MBBS, MS (General Surgery)	Reg. No.	KMC/41892/2016

Clinical Details

Chief Complaint:	Patient presented with severe right lower abdominal pain, nausea, vomiting since 12 hours
Final Diagnosis:	Acute Appendicitis with Perforation (ICD-10: K35.8)
Procedure Performed:	Emergency Laparoscopic Appendicectomy
Anaesthesia Given by:	Dr. Deepak Pillai, MBBS, MD (Anaesthesia)

History of Present Illness:

Mohammed Irfan Khan, a 34-year-old male, presented to emergency with acute onset right iliac fossa pain, fever (102°F), nausea and vomiting. Examination revealed guarding and tenderness at McBurney's point. USG abdomen confirmed acute appendicitis with periappendicular fluid.

Investigations at Admission:

USG Abdomen: Enlarged appendix 11mm diameter with periappendicular fluid. CBC: WBC 16,800/cmm. CRP: 142 mg/L. CECT Abdomen: Perforated appendicitis with free fluid.

Treatment Given:

Emergency laparoscopic appendicectomy performed under GA. Perforated appendix removed. Peritoneal lavage with 3L normal saline. Drain placed in pelvis. Port sites closed.

Condition at Discharge:

Patient discharged in stable condition. Vitals stable. Wound healthy. Advised rest and follow-up.

Discharge Medications:

Inj Ceftriaxone 1g IV BD x 5 days (then oral), Tab Metronidazole 400mg TID x 5 days, Tab Diclofenac 50mg TID SOS, Tab Pantoprazole 40mg OD.

Follow-up Instructions:

Review after 7 days in OPD. Suture removal after 10 days. Avoid strenuous activity for 6 weeks. Contact emergency if fever, pain, or wound discharge. Next OPD: 15-Apr-2025.
