IP Number	IP/2025/5341	Ward / Bed	Nephrology Ward / Bed No. 269

Admission & Discharge Details

Date of Admission	18-Apr-2025	Time of Admission	17:45
Date of Discharge	22-Apr-2025	Time of Discharge	13:00
Length of Stay	4 Days	Admission Type	Planned
Department	Nephrology	Treating Doctor	Dr. Harish Gowda
Qualification	MBBS, MD, DM (Nephrology)	Reg. No.	KMC/47123/2019

Clinical Details

Chief Complaint: Patient presented with decreased urine output, generalised swelling, breathlessness on exertion

Final Diagnosis: End Stage Renal Disease (ESRD) — Chronic Kidney Disease Stage 5 (ICD-10: N18.5)

Procedure Performed: Haemodialysis — 3 sessions + Arteriovenous Fistula Revision

History of Present Illness:

Lakshmi Venkataraman, a 67-year-old female with known ESRD on maintenance haemodialysis, admitted for scheduled dialysis sessions and revision of AVF due to inadequate flow. Serum creatinine 8.4 mg/dL, BUN 98 mg/dL.

Investigations at Admission:

Serum Creatinine: 8.4 mg/dL. BUN: 98 mg/dL. eGFR: 6 mL/min. Potassium: 5.8 mEq/L. USG Doppler: AVF flow inadequate, stenosis at anastomotic site.

Treatment Given:

3 sessions of haemodialysis performed (4 hrs each, QB 300 ml/min). AVF revision done under local anaesthesia — balloon angioplasty at stenotic segment. Flow improved to 450 ml/min.

Condition at Discharge:

Patient discharged in stable condition. Vitals stable. Wound healthy. Advised rest and follow-up.

Discharge Medications:

Tab Amlodipine 5mg OD, Tab Furosemide 40mg OD, Tab Sodium Bicarbonate 500mg TID, Inj Erythropoietin 4000 IU SC twice weekly, Sevelamer Carbonate 800mg TID with meals.

Follow-up Instructions:

Review after 7 days in OPD. Suture removal after 10 days. Avoid strenuous activity for 6 weeks. Contact emergency if fever, pain, or wound discharge. Next OPD: 29-Apr-2025.
